1. El Problema / Necessitat / / Oportunitat

Instead of owning your day, you're just putting out fires. You end up wasting your best energy on random distractions and 'busy work' while the big tasks never get done.

We swap healthy meals for junk food to save a few minutes, but the brain fog and 'sugar crashes' end up making it impossible to actually remember what we're studying.

We ditch the gym to 'gain time,' but we're actually losing. Without moving, your brain gets stuck in high-stress mode and loses its natural ability to recharge and focus.

The lack of clear financial control during studies creates an anxiety that hinders concentration, turning studying into a financial burden you're worried about, instead of a goal you're excited for.

9. Establiment de la VISIÓ de PRODUCTE

The application aims to help users organize their studies, responsibilities, and routines through realistic daily planning. It seeks to reduce stress, mental overload, and disorganization by creating a system that adapts to real life, helping users stay focused, balanced, and in control of their time.

8. Principis de disseny

The "Single-Focus" Interface
Every screen should clearly answer one question: "What is the best use of my time right now?"

Fluid and Adaptive Layout
The interface should use a flexible layout where schedule blocks can expand, shrink, and move smoothly as plans change, reflecting the dynamic nature of time.

Frictionless "Micro-Entry"
Design for interactions that allow tasks to be added, moved, or deleted in under three seconds through natural language or simple gestures.

Psychological Safety & Softness
Utilize a "Low-Stress" color palette and encouraging language to reward progress rather than punishing unavoidable delays or missed targets.

2. Públic objectiu A qui se li està resolent el problema? qui utilitzarà el Producte?

Multi-subject students:
University and college students managing multiple subjects at once

Working Students:
Students balancing studies with part-time jobs or other responsibilities

Routine-seeking users:
People who want better control over their time, habits, and routines

Self-Improvement Users:
Users interested in building better habits and improving their daily planning.

3. Necessitats dels usuaris

Què necessiten els teus usuaris?
Quins són els seus inconvenients o tasques a acomplir?

Clear structure and daily planning:
Users need to know what to do and when, without having to constantly make decisions.

Focus on high-priority tasks:
Users need help identifying what matters most instead of wasting time on distractions or low-value activities.

Reduced stress and mental clarity:
Users need to feel in control of their responsibilities, avoiding overwhelm, anxiety, and mental fatigue.

Balanced lifestyle management:
Users need to effectively combine studying, health, exercise and rest without sacrificing one area for another.

Financial awareness and stability:
Users need to reduce financial anxiety during their studies in order to stay focused and motivated.

4. Funcionalitats Quines són algunes de les funcions o serveis que resoldrien les necessitats dels usuaris?

Smart Rescheduling:
Automatically adjusts tasks and study sessions when plans change or a session is missed.

Hybrid Calendar:
Automatically fills your free time with study and rest blocks, working around your fixed job hours and routines.

Life & Meal Planner:
Suggests quick, healthy, and budget-friendly meals tailored strictly to your available time and finances.

Movement Snacks:
Short exercise micro-routines between study sessions to boost brainpower when you don't have time for a full gym workout.

Performance Audit:
Analyzes your actual study habits to suggest moving tougher subjects to your peak productivity hours.

Focus Mode:
A system-level focus environment that protects work sessions from interruptions.

5. Proposta de valor diferencial Què fa que el producte sigui especial? Com és millor aquest producte que el que ja estan utilitzant els usuaris?

Real-Time Adaptive Rerouting
Unlike static calendars that "break" the moment you run 10 minutes late, this app acts as a GPS for your day, instantly recalculating your entire schedule when life happens.

Energy-Centric Task Matching
Most tools treat every hour as equal, but our algorithm prioritizes high-focus tasks like studying during your biological peak energy windows and chores during your slumps

The "Choice Fatigue" Killer
Standard apps create "choice paralysis" by presenting a long list of tasks; our system solves this by serving up one singular activity based on your current time and location.

Behavioral Truth Engine
While other planners rely on your optimistic (and often incorrect) time estimates, our app learns your actual pace and builds in "invisible buffers" to prevent over-scheduling.

6. Objectius i mètriques

quines mètriques caldrien per tal de saber que el producte té èxit?

AI Trust:
Percentage of automatic schedule adjustments the user accepts without modifying them manually.

Wellness Adherence:
Measure the amount of "movement snacks" and planned meals that users actually complete.

Stress Reduction:
Feedback from users about whether the platform helps them feel more organized and less overwhelmed.

Completion Rate:
Percentage of planned study or work blocks that the user successfully starts and finishes.

User Retention:
Measure the percentage of people who continue using the app as a daily habit after 30 days.

7. La veu del client

què dirien els usuaris feliços amb el producte?

"I finally feel in control of my day instead of constantly falling behind."

"I don't have to think about what to do next, the app organizes everything for me."

"I'm less stressed and actually getting things done while still taking care of myself."
